SebringSoft Service Portfolio

SebringSoft headquarter in Sarasota Florida offers comprehensive expertise: combination of broad application know-how based on experience from international projects, extensive knowledge of the engineering process with skills in innovative technologies and a clear project methodology. Experienced consultants understand your business processes, help you to analyze and optimize them and build up your appropriate IT solutions with assistance of our project and software engineers. The service portfolio of SebringSoft covers all important project phases:

- Application neutral consultancy for your IT strategy
- Assistance for set-up of your entire product design processes
- Consulting for introducing new technologies including ROI calculations
- Project management and project controlling
- Implementation of new solutions based on your software decision
- Project accompanying Change management
- Support for roll-out and go-live
- End-user training and assistance for administrators
- Migration of legacy data

Focus on discrete industries

The professional services of SebringSoft are focused on the following aspects of IT projects within discrete industries:

- Introduction and migration of PDM/PLM applications
- Setup and enhancement of service oriented integration platforms (EAI / SOA)
- Integration and migration of legacy systems

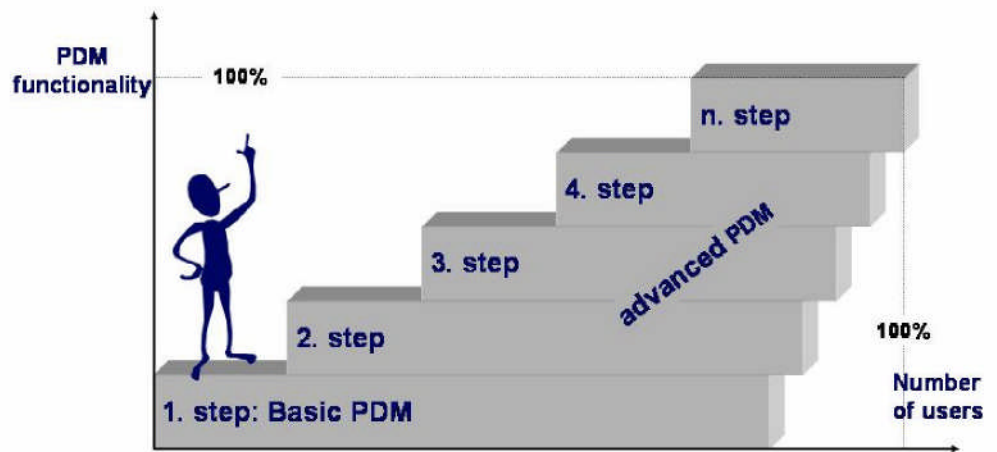

SebringSofts' strategy for introducing PLM

Product Lifecycle Management (PLM) has a strong impact on the long-term competitiveness of companies within discrete industries since they manage data along the whole business value chain.

While these companies are forced to respond immediately to changes within their specific market, they themselves are subject of permanent transformations.

Therefore the successful introduction of a PLM system is not only based on clearly formulated goals and well specified implementations but requires also a flexible reaction to upcoming internal reorganization needs and changing availability of project resources and budgets.

The PLM strategy of SebringSoft accommodates the breaking down of even complex PLM programs to well-defined partial projects each covering a consistent and manageable range of functionality. These projects should go live within 6 months and have to show up a fast ROI. This approach helps to make the entire PLM program able for accommodate changing requirements and possible shifts in general conditions.

Know-how for mySAP PLMTM

In addition to the "classic" PDM/PLM core functions like Material Master and BOM Management as well as Document and Engineering Change Management SebringSoft has built up profound skills for some really interesting engineering focused features within mySAP PLMTM. SebringSoft consultants have great experience concerning their practical use, their limitations within daily business, and the ability to adopt for specific processes:

- iPPE (integrated Product and Process Engineering)
- cProject Suite and cFolder
- xRPM (Resource and Program Management) and xPD (Product Definition)

Alternate strategies for system migrations

Besides the well-known "hard" migration of an existing PDM system towards a complete PLM standard solution like mySAP PLMTM, SebringSoft provides alternate migration paths. These approaches distinguish themselves by a well-balanced temporal distribution of costs and a smaller regression of productivity within this critical change-over phase. The highly ergonomic Java client SebringSoft plays an important key role and improves system acceptance by end users in this and other project phases.

Know-how for SAP NetWeaverTM

For several years, SebringSoft has possessed extensive knowledge in design, implementation and run-time of Service Oriented Architectures (SOA) on basic technologies like Java, XML and web services. From the very first beginning of SAP's NetWeaverTM initiative, SebringSoft recognized the signals and accepted the offer from SAP to develop several certified integration solutions for this platform as a SAP software partner.

With this head start in competence and experience SebringSoft is able to assist customers actively for their specific integration projects. SebringSoft consultants have at their disposal the rare combination of broad process and application knowledge within discrete industries as well as deep know-how of the future-oriented technologies of SAP NetWeaverTM, in special for the following:

- Building up business processes using the Exchange Infrastructure (XI) and BPM
- Process integration of third party solutions with system specific XI adapters
- Harmonization of master data using the Master Data Management (MDM)
- Set-up of system independent user interfaces with SAP NetWeaverTM Portal
- Design and implementation of solutions based on Business Intelligence (BI)
- Concept and realization of customer driven Composite Applications

SebringSoft – Your partner

SebringSoft is your project partner for integration solutions over the entire enterprise value chain. Our staffs are distinguished by extensive experience in international projects, know-how in the organization and improvement of business processes, in data modeling and system integration as well as extensive application knowledge.

We offer consultation as well as design and implementation of integrated solutions, from the engineering through production, focused on business benefits to the enterprise.
